

Card Safe™

The better memory card protector

Card Safe™ Store

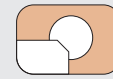

At a first glance, the Card Safe Store looks like a DVD cover. Inside it consists of a foam rubber insert where memory cards can be safely kept in specific compartments. Gepe's EasyGrab™ system ensures easy and quick removal of cards.

The new Card Safe Store is available in two versions: the black version features an index sheet on the outside and flaps on the inside where index prints or other paper can be kept. The second version is transparent without index sheet or flaps. As it is transparent, users can see which cards are stored even if the box is closed.
